Credo Growth Fund, a sub-fund of the Credo ICAV Class A Retail Accumulation GBP Shares (ISIN code: IE00BDFZR430)

The Fund is managed by FundRock Management Company S.A. (The Management Company)

Objectives and investment Policy

Objective:

The investment objective of the Fund is to provide attractive risk adjusted returns from a combination of investments in equity and debt instruments as well as authorised collective investment schemes. The Fund will have a focus on developed capital markets. There can be no assurance that the Fund will achieve its investment objective.

Policy:

The Fund will seek to achieve its investment objective by investing directly in:

- A broad and globally diversified range of asset types which will consist of equities, debt securities and collective investment schemes.
- The equities the Fund holds will consist of shares issued by a range of companies operating in different geographical regions and business sector. The companies will vary in terms of size.
- The debt securities in which the Fund invests may include fixed and floating rate corporate and government bonds, notes and debentures. The rating of these may be investment grade or high yield or unrated.
- Such instruments shall not exceed 90% of the Net Asset Value of the Fund.
- The exposure obtained through investments in collective investment schemes will be consistent with the overall investment strategy of the Fund.
- The Fund may invest up to 20% of its Net Asset Value in collective investment schemes.

- The Investment Manager invests in a diversified portfolio and has the flexibility to change the allocation between sectors and asset classes where these are consistent with the Fund's investment policy.

- The Fund may hold up to 50% of the NAV of the Fund in cash and including, for the avoidance of doubt, Money Market Instruments.

The Sub-Fund is actively managed and the investment objectives and strategy does not refer to a benchmark. Should investors wish to measure the performance of the Sub-Fund for comparison purposes, then the Investment Manager would suggest using IA Flexible Investment Sector as an indicator.

Other information:

- You can buy and sell shares on most business days where the stock exchange is open for a full range of services.
- Investment in the Fund may be suitable for investors who understand the Fund's risks and intend to invest their money for at least five years.
- The Fund's base currency is pound sterling.
- The Administrator carries out investors' requests, to buy, sell or switch, at 22:00 hours (Irish time) each Friday (which excludes Irish public holidays when it falls to the next business day). If the Administrator receives a request after 17:00 hours (Irish time) on a Friday, it will be dealt with at the next Valuation Point.
- As you hold accumulation shares, income from investments in the Fund will be rolled up into the value of your shares.

Risk and reward profile

The indicator is based on the available history of the returns of the Sub-Fund completed with the history of the returns of a representative portfolio. The risk category shown is not guaranteed and may change over the time. A risk indicator of "1" does not mean that the investment is "risk free". Historical data used to calculate this indicator may not be a reliable indication of the future risk profile.

The Fund is placed in this category as most of its assets will be permanently exposed to international equities.

Diversified exposure to equity markets, interest rate risk, credit risk and currency risk explains this Sub-Fund's classification in this category.

The lowest category does not mean a risk free investment.

For more information on risks, please refer to the prospectus of the Sub-Fund.

The Sub-Fund is rated 4 due to the nature of its investments which include the risks listed below.

These factors may impact the value of the Sub-Fund's investments or expose the Sub-Fund to losses.

- **Equity Investments Risk:** Investing in equity shares means you are taking a stake in the performance of that company, participating in the profits it generates by way of dividends and any increase in its value by way of a rise in its share price. If the company fails, however, all your investment may be lost with it.

- **Market Volatility Risk:** Equities invested in by a fund may involve substantial risks and may be subject to wide and sudden fluctuations in market value, with a resulting fluctuation in the amount of profits and losses. In addition, relatively small companies in which a fund may invest may lack management depth or the ability to generate internally, or obtain externally, the funds necessary for growth and companies with new products or services could sustain significant losses if projected markets do not materialise.
- **Credit and Fixed Interest Securities:** Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. The value of a fixed interest security will fall in the event of the default or reduced credit rating of the issuer.
- **Counterparty Risk:** The Fund could lose money if an entity with which it interacts becomes unwilling or unable to meet its obligations to the Fund.
- **Liquidity Risk:** Certain securities could become hard to value, sell at a desired time and price, or cease to trade altogether.
- **Management Risk:** Investment management techniques that have worked in normal market conditions could prove ineffective or detrimental at other times.
- **Exchange Rate Risk:** Fluctuations in exchange rates may cause the value of your investment to rise or fall.
